

Meeting Agenda

Date: 2014-04-01

Facilitator:
Erik Risfelt

Participants:
Markus Bergland
Pierre Krafft
Jacob Turesson

1. Objectives (5 min)

Decide whether we should use IDs or built in references?

Decide what serializer library we should use.

Add tests for model.

2. Reports (15 min) From previous meetings, (un)solved issues, etc.

Using IDs will be beneficial since it will make the serialized output prettier. Any way to make the serializer do that automatically?

Model seems to be correct. Will need to incorporate ID if decided to use IDs.

3. Discussion items (35 min)

(a) How do we do...?

Serialization? We want model parts to be separated into different directories for easy exporting/importing. Using IDs might be an easy way of doing this.

(b) What to do...?

Add ID usage to model.

Use XStream as serializer.

(c) Why is...?

Are IDs needed? We know no other way of making model parts separated to make it possible to save them in different directories. It's also an easy way to make a reference invalid when an item is removed from the model. E.g. when a scene is removed, but an action is referencing it.

4. Outcomes and assignments (5 min)

We should write tests where needed and add IDs.

(a) Erik should...

Research whether IDs are needed or if there is a way to work without it

Set up basic model classes, make sure they are using the correct data.

(b) Markus should...

Set up basic model classes, make sure they are using the correct data.

(c) Pierre should...

Write File input/output using XStream

5. Next meeting?
