Meeting Agenda

Date: 2014-05-02

Facilitator:
Erik Risfelt

Participants:
Markus Bergland
Pierre Krafft
Jacob Turesson

1. Objectives (5 min)

2. Reports (15 min) From previous meetings, (un)solved issues,
   etc.
Pierre has not yet added the Maven plugins. Wants to talk about which ones to add.
Jacob states that libGDX is far more complicated than he initially thought, and has to prolong his
research.
Erik says he has a good idea of how events should be implemented but wants more time to
work out the details

3. Discussion items (35 min)

  (a) How do we do...?
Most of the libGDX standards are non-standards if compared to other libraries. We will have to
use a lot of time to find scrollbars, frames etc etc.

  (b) What to do...?
We will add CheckStyle and Surefire. CheckStyle will generate reports about code quality.
Surefire will generate test results from unit tests.

4. Outcomes and assignments (5 min)
  (a) Erik should....
Continue work on an event handler
Look to simplify Model, far too many interfaces at this time

  (b) Markus should…
Make sure that the RAD stays up to date.
Cooperate with Jacob so that the GUI reaches desirable quality.

  (c) Pierre should...
Add Maven plugins for checking the code quality.

(d) Jacob should…
Find easy ways into the libGDX base of coding, and finish work on a rough GUI.

5. Next meeting?
2014-05-06
